

Vertical Rubber Injection Molding Machine with PLC Control

This vertical injection molding machine is designed for rubber processing applications. It features a hydraulic clamping system, precision injection control, and a programmable logic controller (PLC) for automated operation and enhanced safety.

Overview

High-Precision Vertical Rubber Injection Molding

This vertical rubber injection molding machine is engineered for precision and efficiency in rubber processing operations. Featuring a robust hydraulic clamping system and an integrated programmable logic controller, it ensures consistent output for various manufacturing requirements. Its compact footprint is designed to fit seamlessly into diverse production environments while maintaining high safety standards.

Key Features

Operational Capabilities

PLC Control, Hydraulic Clamping, Precision Injection, Automated Operation

Safety & Design

Integrated Safety

- Emergency stop buttons
- Safety interlocks

Operational Metrics

Machine Specifications

1 PLC

Control System
