Product Overview

Efficient Sesame Processing

This vertical sesame seed cleaning and peeling machine is engineered to maximize internal space utilization while maintaining a compact footprint. It features a unique composite stirrer design that facilitates axial, radial, and toroidal shunts, ensuring thorough material flipping without dead ends. The machine is built for simplicity, ease of operation, and low maintenance, making it a reliable solution for professional food processing environments.

Design & Construction

Structural Design	Vertical
Mixing Technology	Composite Stirrer, Axial Shunt, Radial Shunt, Toroidal Shunt

Maintenance & Support

Support Details

- Free replacement parts for design defects
- Technical support provided for human-factor issues

Warranty Period	1 Year
Maintenance Policy	Lifelong maintenance support
