

Vertical Sewage Pump for Wastewater Treatment

This vertical sewage pump features a large channel structure, enhancing its drainage capacity. It efficiently passes solid grains up to 50% of the pump's caliber, making it suitable for various sewage and wastewater applications.

Product Overview

High-Efficiency Vertical Sewage Handling

The WL/LW series vertical sewage pump is engineered with a specialized large-channel structure, significantly enhancing drainage capacity. Designed for vertical installation, this pump effectively handles solid particles with diameters up to 50% of the pump caliber. It serves as a reliable solution for municipal sewage systems, residential drainage, and industrial wastewater management.

Technical Capabilities

Solids Handling Capacity	50 % of caliber
Installation Configuration	Vertical
Submersible	No

Applications

Primary Applications

- Municipal sewage systems
- Residential sewage discharge
- Public facility drainage
- Industrial and mining wastewater transport
- Clear medium transportation

Suitable Sectors

Municipal • Industrial • Residential • Mining
