

Vertical Tank Belt-Driven Air Compressor

This belt-driven air compressor features a vertical tank design for space-saving storage. It is equipped with a heavy-duty induction motor for reliable performance and long life.

Overview

High-Performance Vertical Air Compressor

This belt-driven air compressor features a vertical tank design, optimized for space-saving storage in professional workshops. Equipped with a heavy-duty induction motor, it ensures reliable performance and longevity for demanding tasks. The unit includes essential safety and control features like a pressure gauge, safety valve, and air regulator, making it suitable for a wide range of industrial and DIY applications.

Technical Specifications

Input Power

3 HP Horsepower	2.2 KW Power Output
---------------------------	-------------------------------

Maximum Pressure

115 psi PSI	8 bar Bar
-----------------------	---------------------

Tank Capacity	20 GAL
Air Delivery Rate	250 L/min
Operating Speed	1030 RPM

Components

Included Features

- Pressure gauge
- Safety valve
- Air regulator
- Belt-driven system

Cylinder Configuration	165mm x 2
-------------------------------	-----------
