

Vertical Transportation Lift

This vertical transportation lift provides efficient movement between floors. It ensures convenient access for both people and goods in multi-level buildings.

Product Overview

Heavy-Duty Vertical Transportation Solution

This vertical transportation lift is engineered for the secure handling and movement of massive, oversized industrial components. Designed to support critical infrastructure projects, it provides reliable stability for heavy loads such as hydroelectric turbine runners. Its robust construction ensures safe transit through complex environments, making it an essential asset for large-scale industrial logistics.

Technical Specifications

Transportation Features

- Multi-axle trailer integration
- High-stability mounting system
- Urban environment maneuverability

Load Application

Oversized Loads, Industrial Components, Hydroelectric Equipment

Performance Metrics

Primary Application

Kaplan Turbine Runner • Power Generation Infrastructure
