

Vertical Transportation System

This elevator is designed for vertical transportation in commercial and residential buildings. It facilitates the movement of people and goods between different floors.

Product Overview

Industrial Vertical Transportation

This vertical transportation system is engineered for robust industrial and commercial applications. Designed to integrate seamlessly with large-scale steel structure buildings, it ensures efficient movement of materials and personnel. The system prioritizes structural integrity and operational safety, making it an ideal solution for demanding construction and facility environments.

Technical Specifications

Structural Compatibility

- Steel column frameworks
- Steel truss roof systems
- Multi-level industrial buildings

Primary Application

Industrial, Commercial, Construction

Performance Metrics

Load Capacity

2000 kg

Rated Capacity
