

VHF Wireless Dual-Channel Microphone System

This is a VHF modular dual-channel wireless microphone receiver system. It has individual volume controls for each channel and stable frequency operation.

Product Overview

Professional Wireless Audio Performance

The V-2010 is a VHF modular dual-channel wireless microphone receiver system designed for high-quality audio capture in diverse environments. Engineered with quartz crystal locked frequency technology, this system ensures stable and reliable signal operation during use. With independent volume control for both Channel A and Channel B, it offers operators precise control over audio levels to suit any application.
