

Vibrating Motor for Industrial Machinery

This industrial vibrating motor is designed for metallic processing applications. It features a robust construction and is suitable for vibrating screens, feeders, and conveyors.

Product Overview

Industrial Vibrating Motor

This industrial vibrating motor is engineered specifically for demanding metallic processing applications. It features a robust, heavy-duty construction designed to provide consistent performance in challenging environments. With its stable mounting base and durable design, it is an ideal solution for powering vibrating screens, material feeders, and industrial conveyors.

Technical Specifications

Construction Features

- Robust metallic housing
- Sturdy mounting base
- Multiple support legs for stability
- High-visibility color scheme (Blue body/Orange weights)

Model Designation	V-20
Suitable Applications	Vibrating Screens, Feeders, Conveyors, Metallic Processing
