

Vibrating Plate Compactor

This vibrating plate compactor features a ductile iron base plate and a hydraulic system for forward and reverse operation. It is engineered for optimal soil compaction in construction and landscaping applications.

Overview

High-Efficiency Compaction Solution

This vibrating plate compactor is engineered for optimal soil compaction in construction and landscaping applications. Featuring a powerful engine and a durable steel base plate, it delivers high-frequency vibrations for efficient material consolidation across various surfaces. The ergonomic handle design minimizes operator fatigue, ensuring reliable performance and long-lasting durability for demanding construction projects.

Performance

Ideal Applications

- Granular soil compaction
- Asphalt paving
- Paving stone installation
- General landscaping

Performance Highlights

100 LF

Series Model

Compliance

Certifications & Standards

CE, ISO 9001:2000, SGS
