

Vibration Isolation Mount for Pumps and Vacuum Equipment

This vibration isolation mount is designed for pumps and vacuum equipment. It features a two-piece circular construction with a central threaded hole for attachment.

Product Overview

High-Performance Vibration Isolation

This vibration isolation mount is engineered specifically for pumps and vacuum equipment to significantly reduce noise and mechanical vibration transmission. Featuring a robust two-piece circular construction, it ensures structural integrity and stability in demanding industrial environments. The integrated damping elements are crafted from high-resilient materials, providing effective shock absorption and extending the lifespan of connected machinery.

Technical Specifications

Design Features

- Two-piece circular construction
- Central threaded hole for secure attachment
- Corrosion-resistant metal components
- Vibration and noise reduction geometry

Suitable Applications

Industrial Pumps • Vacuum Equipment • Vibration Sensitive Machinery

Material Composition

Machined Aluminum, Stainless Steel, Resilient Damping Material
