

Vibration Motor for Heavy Rolling Doors

This vibration motor is designed for light to medium-sized applications, particularly heavy rolling doors. The electric motor produces vibration for various industrial processes and features a durable, robust housing.

Product Overview

JLZ1500SF Series Vibration Motor

The JLZ1500SF series is a robust electric vibration motor engineered specifically for light to medium-sized industrial applications. It is optimized for use with heavy rolling door machinery, providing reliable performance in demanding environments. Featuring a durable metal housing, this unit is designed to withstand rigorous daily operation while maintaining consistent output.

Technical Specifications

Motor Class

Light • Medium-sized

Model Number

JLZ1500SF

Application

Heavy Rolling Doors, Industrial Machinery, Vibration Processing
