

Vibration Motor for Industrial Applications

This industrial vibrator motor is suitable for various applications including vibrating screens, feeders, and conveyors. It provides consistent vibration for efficient material handling and processing in construction and mining environments.

Overview

Industrial Vibration Motor

This industrial vibrator motor is engineered for reliability and consistent performance in demanding environments such as mining and construction. Designed for integration into vibrating screens, feeders, and conveyors, it ensures efficient material handling and processing. The unit features robust construction and sealed bearings, making it suitable for continuous operation under high vibration forces.

Technical Specifications

Key Features

- Adjustable eccentric weights for amplitude control
- Heavy-duty construction for enhanced durability
- Sealed bearings for long-lasting performance
- Designed for continuous operation

Suitable Applications

Vibrating Screens, Feeders, Conveyors, Construction, Mining

Performance

Operational Capability

Continuous Duty • High Vibration Force
