

Vibratory Roller

This vibratory roller is used for compacting soil, gravel, concrete, or asphalt. It features a smooth drum that vibrates to compact the material.

Overview

Professional Compaction Performance

This high-performance vibratory roller is engineered for demanding road construction and civil engineering projects. Featuring a robust dual-drum design, it excels at compacting soil, gravel, and asphalt with precision and efficiency. The enclosed cabin provides a safe and comfortable environment for operators, ensuring productivity throughout long work shifts.

Machine Design

Cabin Configuration

Fully Enclosed • Operator Safety Optimized

Compaction Type

Dual Drum Vibratory

Applications

Suitable Applications

Road Construction, Soil Compaction, Gravel Compaction, Asphalt Paving, Civil Engineering
