

# Vibratory Roller

This vibratory roller compacts soil, gravel, concrete, and asphalt. It uses a steel drum to apply pressure and vibration.

## Overview

### High-Performance Vibratory Compaction

The HOD630 vibratory roller is a robust construction machine engineered for efficient soil, gravel, concrete, and asphalt compaction. Designed for road building and foundation work, it utilizes a heavy-duty steel drum to apply consistent pressure and vibration. This equipment provides operators with precise control, ensuring optimal density and stability for diverse civil engineering projects.

## Technical Specifications

### Key Design Features

- Heavy-duty steel drum
- Operator seating area
- Ergonomic steering controls
- Vibration control system

<b>Model Number</b>	HOD630
<b>Primary Applications</b>	Road Construction, Soil Compaction, Gravel Compaction, Concrete Compaction, Asphalt Compaction, Foundation Work
