

Video Intercom System with Keypad and Handset

This video intercom system offers secure communication and access control. It features a built-in LCD screen, keypad, and handset for visual verification of visitors and standard telephone functions.

Overview

Advanced Secure Access Control

This professional-grade video intercom system is engineered for reliable security and seamless visitor management in both residential and commercial environments. The unit integrates high-quality video monitoring with traditional voice communication and keypad access control. By enabling visual verification before granting entry, it significantly enhances the safety and efficiency of any building access point.
