

Video Surveillance Communication Cable

This communication cable is designed for video surveillance systems. It ensures reliable signal transmission for clear and stable video feeds, with a length of 200 meters suitable for various installations.

Product Overview

High-Performance Surveillance Connectivity

This communication cable is specifically engineered for video surveillance systems, ensuring reliable signal transmission for clear and stable video feeds. With a generous length of 200 meters, it offers the necessary reach for complex installation scenarios in both residential and commercial security environments. Its robust design is optimized for consistent performance, making it a dependable choice for professional security setups.
