Overview

Virtual Desktop Solution

This virtual desktop client system provides a cost-effective and efficient way to deploy multiple independent workstations from a single host computer. By utilizing a specialized PCI card architecture, the system allows up to 7 users to share one host PC, significantly reducing hardware and maintenance costs. It is an ideal solution for schools, offices, and multi-user environments that require centralized management and resource sharing.

Technical Specifications

Maximum Users Per Host	7
Connectivity	Ethernet, PS/2, VGA
Cable Type	UTP Cable (Cat5e)
Maximum Cable Length	10 m

Compatibility

Operating System Compatibility	Windows, Linux
--------------------------------	----------------

Key Features

System Capabilities

7 users

Max Users

10 m

Max Distance

Core Benefits

- Centralized IT management
- Reduced hardware costs
- Enhanced energy efficiency
- Multimedia application support
