

# Vitrified Bonded Grinding Wheels

Vitrified bonded grinding wheels feature a durable bond that securely holds abrasive grains. They are available in various sizes, grits, and shapes to suit diverse grinding needs for both wet and dry operations.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Grinding Solutions

These vitrified bonded grinding wheels are engineered for precision grinding and finishing applications, offering exceptional durability and consistent material removal. The specialized vitrified bond secures abrasive grains for high thermal resistance and structural rigidity, making them ideal for both wet and dry operations. They are versatile tools suitable for processing metals, ceramics, and composites with high dimensional accuracy and smooth surface finishes.

## Technical Specifications

### Operation Modes

- Wet Grinding
- Dry Grinding

### Bond Type

Vitrified

### Compatible Materials

Metals, Ceramics, Composites

## Key Features

### Performance Benefits

**1 High**

Thermal Resistance
