

Volumetric Water Meter for Potable Water

This volumetric water meter accurately measures cold potable water consumption in residential and commercial applications. Its durable construction and sealed register ensure reliable readings across various flow rate requirements.

Product Overview

Volumetric Water Meter for Potable Water

This volumetric water meter is engineered for the precise measurement of cold potable water consumption in both residential and commercial environments. Designed with durability and reliability in mind, it features a sealed register to ensure consistent, accurate readings over time. The unit is optimized for water billing and monitoring systems, offering low head loss and straightforward installation for various flow rate requirements.

Technical Specifications

Key Performance Features

- High measurement accuracy
- Low head loss
- Sealed register design
- Easy installation

Performance Metrics

50 mm

Max Size

15 mm

Min Size

Model Series

LXS-15E~50E

Application

Residential, Commercial, Potable Water
