

Vortex Impact Crusher

This crusher is designed for processing various materials in mining and industrial applications. It employs a vortex impact mechanism to deliver powerful crushing force and ensure consistent particle size reduction.

Product Overview

Efficiency Meets Performance

The PFS series vortex strong impact crusher is a high-efficiency solution engineered for both coarse and fine crushing applications. Its unique structural design prioritizes energy savings and operational simplicity, delivering superior product shape for diverse industrial requirements. Designed to handle materials with compression strength up to 250Mpa, this crusher serves critical roles in hydroelectric projects, highway construction, and urban building waste processing.

Technical Capabilities

Max Compression Strength	250 Mpa
Target Industries	Hydroelectric, Highway Construction, Building Materials, Waste Processing

Key Features

Primary Advantages

- Unique structural design
- Easy operation and maintenance
- High efficiency and energy saving
- Adjustable discharge size
- High-quality product shape

Compliance and Standards

CE • ISO 5001 • SGS • Bureau Veritas
