

VX Series Submersible Wastewater Pump

The VX series submersible pumps are designed for efficient and reliable wastewater and drainage applications. Constructed with durable stainless steel housings and robust impellers, these pumps offer excellent resistance to corrosion and abrasion.

Overview

Professional Submersible Wastewater Solutions

The VX Series submersible pump is engineered for reliable performance in civil, industrial, and domestic drainage applications. Featuring a robust design capable of handling solids up to 10mm, it is optimized for efficient fluid transfer from wells, reservoirs, and collection sumps. This versatile series adheres to NEMA dimension standards and ISO 2548 curve tolerances to ensure seamless integration and predictable operation.

Operating Conditions

Maximum Fluid Temperature	35
Max Solid Passage	10 mm
Maximum Immersion Depth	50 m

Electrical Specifications

Power Supply Options

- Three-phase: 380V-415V/50Hz
- Single-phase: 220V-240V/50Hz

Control Features

Start control box, Digital auto-control box, Floating switch

Compliance and Warranty

Standards Compliance

NEMA Dimension Standards • ISO 2548

Warranty Coverage

1 year
