

VX Series Submersible Water Pump

The VX series submersible pumps are designed for efficient and reliable water removal in various applications. The integrated float switch provides automatic on/off operation based on water level, ensuring convenient and energy-efficient performance.

Product Overview

VX Series Submersible Pump

The VX Series submersible pump is a versatile solution engineered for water supply from wells and reservoirs, suitable for domestic, civil, and industrial applications. Designed for reliability, it features a rewindable motor and adheres to NEMA dimension standards for ease of installation. With advanced automatic control options and a 10mm solid handling capacity, this pump is an efficient choice for irrigation and drainage tasks.

Technical Specifications

Maximum Fluid Temperature	35 °C
Maximum Immersion Depth	50 m
Maximum Solid Size	10 mm

Electrical Specifications

Supported Voltage

- 380V-415V/50Hz (Three-phase)
- 220V-240V/50Hz (Single-phase)

Features

Control Features

Start Control Box • Digital Auto-control Box • Floating Switch

Standards and Certifications	NEMA Standard, ISO 2548
------------------------------	-------------------------

Warranty

Standard Warranty	1 year
