

Wafer Check Valve for Backflow Prevention

This wafer check valve is designed for installation between flanges. The disc design ensures quick and reliable closure, minimizing water hammer and pressure surges.

Product Overview

Compact Backflow Prevention

The Wafer Check Valve is designed for installation between flanges, providing a compact and lightweight solution for preventing backflow in pipelines. Its disc design ensures quick and reliable closure, effectively minimizing water hammer and pressure surges. This valve is suitable for a wide range of fluids and applications, offering efficient performance and ease of maintenance for industrial systems.

Technical Specifications

Performance Benefits

- Minimizes water hammer
- Reduces pressure surges
- Easy maintenance
- Versatile fluid compatibility

Installation Type	Wafer (between flanges)
Key Features	Compact Design, Lightweight, Backflow Prevention, Quick Closure
