

Wafer Check Valve for Backflow Prevention

This wafer check valve is designed to prevent backflow in piping systems. It features a circular disc that pivots on a hinge, allowing flow in one direction and automatically closing to prevent reverse flow.

Product Overview

High-Performance Backflow Prevention

This wafer check valve is engineered for reliable backflow prevention in demanding industrial piping systems. Utilizing a robust pivoting circular disc mechanism, it ensures unidirectional flow while automatically sealing to prevent reverse movement. Its durable construction is designed for longevity and consistent performance across a variety of fluid handling applications.

Technical Specifications

Key Features

- Automatic backflow prevention
- Compact wafer design
- Durable metallic construction

Size	6 inch
Material Grade	CF8M
Type	Wafer Check Valve, Pivoting Disc
