

Wafer Check Valve for Backflow Prevention

This valve prevents backflow in piping systems. It is suitable for use in oil fields, chemical processing plants, and environmental protection applications.

Product Overview

High-Performance Lift-Type Wafer Check Valve

This lift-type wafer check valve is engineered for reliable unidirectional flow control in demanding industrial piping systems. Its compact, space-saving wafer design allows for easy installation between standard flanges, making it an ideal choice for space-constrained environments. Built to API standards, this valve ensures robust backflow prevention and features durable construction suitable for various fluid handling applications.

Technical Specifications

Pressure Class

Class 150

Nominal Size (DN)

- 25
- 30

Valve Type

Lift-type wafer check valve

Design Standard

API

Model Identifier

H71
