

Walk-Behind Concrete Power Trowel

This walk-behind power trowel is designed for smoothing and finishing concrete surfaces. It enhances concrete surface compactness and wear resistance, improving work efficiency.

ADDITIONAL IMAGES

Overview

Professional Concrete Finishing

This walk-behind power trowel is engineered for high-performance concrete surface finishing, providing both coarse and fine grinding capabilities. It significantly enhances the compactness and wear resistance of concrete surfaces, making it an essential tool for achieving smooth, level floors. Designed for efficiency, this machine helps operators improve work speed dramatically compared to manual methods.

Typical Applications

Concrete Pavement, Ground Leveling, Airport Construction, Industrial Flooring

Design & Safety

Safety Features

- Centri-safety switch (automatic engine shutdown on loss of control)
- Protective guard ring (detachable type available)
- Robust heavy-weight design for superior stability

Operational Comfort

Yes

Handle Type

Height adjustable for operator comfort and control

Performance & Maintenance

Gearbox Type

Over-built • High Durability

Optional Accessories

- Lifting hook (2.5kg)
- Detachable guard ring

Blade Adjustment

Precision screw control

Transport Features

Integrated lifting tube allows for two-person transport
