

Walk-Behind Double Drum Roller

This walk-behind double drum roller is designed for asphalt and soil compaction. The small roller is suitable for various construction and maintenance applications, offering efficient performance in confined spaces.

Overview

Compact Double Drum Roller

This walking-type double steel roller is designed for high-efficiency compaction in small-scale construction projects. Its compact design allows for superior maneuverability in confined spaces, making it an ideal solution for paving sidewalks, driveways, and maintenance work. Built with durable steel drums, it provides consistent performance on both asphalt and soil surfaces.

Key Features

Design Style

Walk-Behind • Double Drum

Compaction Type

Asphalt, Soil
