

Walk-Behind Rotary Tiller

This agricultural machinery is suited for hard work and site preparation, mainly for dry land and paddy field rotary operations. The all-gear drive machine minimizes power loss and maximizes tillage effect, adapting to various soil conditions with durable steel components.

Product Overview

Professional Soil Cultivation Solution

This diesel-powered rotary tiller is a robust agricultural machine designed for intensive site preparation in both dry land and paddy fields. Featuring an all-gear drive system and a ductile iron casting gearbox, it offers superior durability and efficient power transmission. Its versatile design allows for easy maintenance and adaptability across various terrains including plains, mountains, and orchards.

Technical Specifications

Performance Metrics

1050 mm

Max Tillage Width

100 mm

Tillage Depth

50 ha/h

Productivity

117 kg

Weight

Transmission Features

- All-gear drive system
- Wet method friction plate clutch
- Easy shifting and reverse functions
- Ductile iron casting gearbox

Engine Power Source

Diesel

Operational Versatility

Supported Operations

Pumping, Power Generation, Spraying, Trenching, Short-distance Transport

Terrain Compatibility

Dry Land, Paddy Fields, Orchards, Vegetable Gardens, Tea Plantations, Tobacco Fields
