

Walk-Behind Single Drum Roller

This single drum roller is a compaction machine suited for construction and landscaping tasks. It features a smooth drum for effective soil and asphalt compaction and includes a water tank for dust suppression.

Overview

Professional Compaction Performance

This walk-behind single drum roller is a versatile compaction machine engineered for high-performance soil and asphalt stabilization. Its compact design allows for exceptional maneuverability in tight, confined spaces, making it an ideal choice for both landscaping and infrastructure construction. Equipped with an integrated water system for dust suppression, the unit ensures efficient operation and superior surface finishing.

Performance Specifications

Machine Type	Walk-Behind Single Drum Roller
Compaction Features	Soil Compaction, Asphalt Compaction, Integrated Water Tank
Power Source	Gasoline Engine

Design and Utility

Key Operational Benefits

- Easy-to-use operator controls
- Compact size for confined project sites
- Effective dust suppression system
- Smooth drum design for surface finishing
