

Walking Tractor Seed Drill

This paddy and wheat drilling machine can revolve chipped soil, ditch, sow earth up and crackdown in one pass. It is suitable for drilling in soil containing 30% water after furrowing, and for broadcast sowing cover in uncultivated land.

Overview

High-Efficiency Walking Tractor Seed Drill

The 2BG-6A is a versatile multi-function agricultural machine designed to perform rotary tillage, stubbling, ditching, and sowing in a single pass. Engineered for both paddy and wheat fields, it handles various soil conditions including uncultivated land and zero-tillage environments. By streamlining multiple farming operations, this machine helps agricultural professionals significantly reduce labor costs while increasing overall crop productivity.

Technical Specifications

Dimensions (L*W*H)	890 x 1355 x 700 mm
Working Scope	1200 mm
Cutter Diameter	300 mm
Max Depth of Revolve Cut	60 mm

Compatibility & Operation

Compatible Power Source	12hp-18hp Walking Tractor, Power Tiller
Row Spacing Configuration	Isometry 200mm (Range 133-267mm)
Single Row Drilling Width	50-80 mm

Commercial

Minimum Order Quantity	10
