

Wall Mountable Audio Volume Controller

This wall-mountable volume controller is designed for audio system integration. It features a selectable input switch and rotary volume knob for adjusting audio levels.

Product Overview

Professional Audio Control

This wall-mountable audio volume controller is designed for seamless integration in professional music and fire alarm amplification systems. It features a versatile 5-partition source selection and precise volume control, supporting power capacities ranging from 6W to 200W. Engineered for reliability, the unit supports 100V audio signals and DC24V operation, making it ideal for multi-zone sound distribution environments.

Technical Specifications

Power Capacity

6 W Min Power	200 W Max Power
