

Wall-Mounted Reverse Osmosis Water Purification Machine

This wall-mounted machine uses a multi-stage filtration system to purify water. It is designed to remove impurities and contaminants, providing clean and safe drinking water.

Product Overview

Professional Water Purification Solution

This wall-mounted reverse osmosis water purification system is engineered to provide reliable, high-quality drinking water for professional and household environments. Utilizing a multi-stage filtration process, the unit effectively removes sediment and contaminants through a combination of sediment, activated carbon, and reverse osmosis membrane filters. The integrated digital display offers real-time monitoring of filter life and water quality, ensuring consistent performance and maintenance ease.

System Configuration

Filtration Components

- Sediment Filter
- Granular Activated Carbon Filter
- Reverse Osmosis Membrane Filter

Installation

Wall-mounted

Monitoring and Control

Digital Interface

Filter status monitoring, Water quality display, Digital readout

Key Performance Metrics

Filtration Technology

3 stages

Number of Filtration Stages
