

# Wall-Mounted Split Air Conditioner with WiFi

This wall-mounted split air conditioner provides fast cooling for immediate comfort. It features golden fins, WiFi connectivity, and automatic cleaning for enhanced performance and convenience.

## ADDITIONAL IMAGES

## Overview

### Smart & Efficient Climate Control

This wall-mounted split air conditioner offers a modern solution for residential and commercial cooling and heating needs. It features advanced WiFi connectivity for remote management and a high-frequency startup system for rapid temperature adjustment. With integrated air purification and self-cleaning technologies, it ensures a healthy indoor environment while maintaining high operational efficiency.

## Performance

Rapid cooling technology allows the unit to reach the set temperature in as little as 30 seconds.

### Cooling Performance

**30 s**

Fast Cooling Time

### Operational Modes

- Cooling
- Heating
- Fan Speed Adjustment
- Timer Functions

## Smart Features

### WiFi control

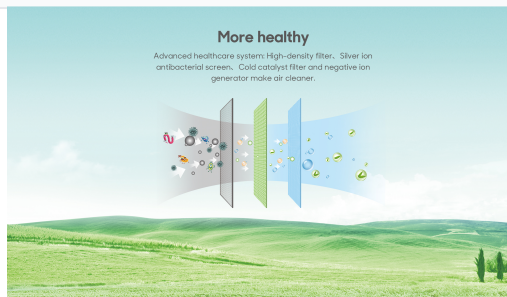

Connect the air conditioner through WiFi and remotely control the air conditioner with the smart devices such as mobile phone at anytime and any place.

Control your indoor climate from anywhere using smart device connectivity.

### Connectivity

WiFi Enabled • Remote App Control • Smart Device Integration

## Air Quality & Health

### More healthy

Advanced healthcare system: High-density filter, Silver ion antibacterial screen, Cold catalyst filter and negative ion generator make air cleaner.

Comprehensive four-stage filtration system for cleaner and healthier indoor air.

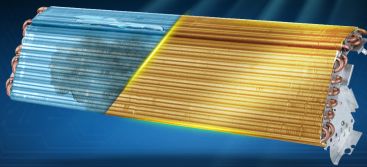

### Advanced Healthcare System

- High-density filter for large particles
- Silver ion antibacterial screen
- Cold catalyst filter for VOC removal
- Negative ion generator

## Maintenance & Durability

### A new generation of golden coating

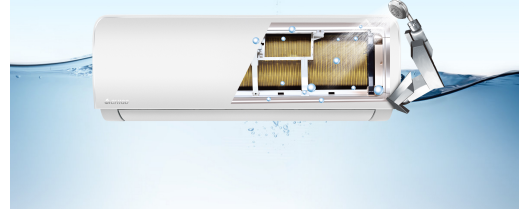

It can improve the hydrophilic characteristics of the fins, keep the fins dry, reduce the dust adhesion and avoid the bacteria breeding, to better improve the heat exchange efficiency and the cooling / heating effect. It strengthens the fins to resist the corrosive elements in the air and moisture to make it more durable.

New generation golden coating improves heat exchange efficiency and protects against corrosion.

### Automatic cleaning

Automatic cleaning: In the cooling mode, the indoor fan delays running, so that a large amount of condensed water is generated on the surface of the evaporator for cleaning the evaporator, ensuring that the evaporator is clean and unobstructed.

Self-cleaning evaporator ensures the unit remains unobstructed and hygienic.

### Golden Fin Coating

- Hydrophilic characteristics to keep fins dry
- Reduced dust adhesion
- Anti-bacterial breeding protection
- Corrosion resistance against moisture and air

### Automatic Cleaning

Uses condensed water on the evaporator surface during cooling mode to remove obstructions and maintain cleanliness.

## Design

Display	Integrated digital temperature and status display
Design Style	Minimalist White, Sleek Curves, Wall-Mounted, Compact
