

Washer and Split Lock Washer Assortment

This assortment includes both split lock washers and flat washers. Split lock washers provide a spring force to resist loosening after tightening, while flat washers distribute the load of a fastener over a wider area.

Product Overview

Comprehensive Fastening Solutions

This washer assortment kit provides a versatile selection of split lock washers and flat washers designed for diverse industrial and mechanical applications. Split lock washers are engineered to provide essential spring force, effectively resisting loosening after tightening, while flat washers ensure optimal load distribution to minimize material stress. This combination makes the set ideal for automotive, machinery, and general fastening requirements where reliability and durability are paramount.
