

Washing Machine Clutch and Agitator Assembly

This assembly includes both the clutch and agitator, essential for washing machine functionality. The clutch engages and disengages the agitator or drum during washing and spinning, while the agitator ensures effective cleaning.

Product Overview

High-Performance Washing Machine Components

This assembly includes essential mechanical drive components designed for top-loading washing machines. Featuring both a clutch mechanism for cycle engagement and an agitator assembly for water circulation, these parts are engineered for reliable performance and durability. The robust plastic construction ensures longevity and efficient operation during both wash and spin cycles.

Technical Specifications

Compatibility

Top-Loading Machines

Clutch Model ID	JN-001-AX-40-30
Agitator Model ID	JN-001-AX-53-50
Material	Durable Plastic

Component Features

Clutch Assembly Key Features

- Multi-tiered pulley system for variable speeds
- Central shaft motor connection
- Cone-shaped base with internal vanes
- Integrated mounting holes for stability

Agitator Assembly Key Features

- Multi-vane impeller design
- Efficient water circulation
- Central shaft drive
- Robust housing for heavy-duty use
