

Washing Machine Clutch Assembly

This clutch assembly is designed for use in automatic washing machines. It features a metal housing and a pulley system for belt-driven operation.

Overview

High-Performance Clutch Assembly

This washing machine clutch assembly is engineered for reliable operation in automatic laundry appliances. It features a robust construction designed to facilitate smooth engagement and disengagement of the drum and agitator during washing, spinning, and rinsing cycles. Built for durability, this component ensures consistent performance in demanding appliance environments.

Technical Specifications

Speed Reduction Scale	1:5
Wave Wheel Spline Size	9x9x11.5
Inner Gear Modulus	1
