Product Overview

High-Performance Direct Drive Motor

This Direct Drive Motor (DDM) is engineered for modern washing machine systems, offering robust construction and reliable performance. Featuring a stator with precision copper windings and a reinforced rotor assembly, it is designed for heavy-duty appliance applications. Its modular design and integrated electrical connectors ensure seamless compatibility with advanced electronic control systems.

Technical Construction

Key Components

- Stator with copper windings
- White plastic rotor assembly
- Integrated structural ribs
- Gray protective housing
- Electrical interface connector

Build Quality

Industrial Grade • Reinforced Structure

Design Features

Direct Drive, Modular Assembly, Heavy-Duty, Radial Support
