

Washing Machine Heating Element

This heating element is designed for use in washing and drying machines. It consists of multiple coiled heating wires arranged within a metal frame with ceramic insulators, providing efficient and controlled heat for drying clothes.

Product Overview

High-Efficiency Heating Solution

This robust heating element is engineered specifically for use in professional washing and drying appliances. Featuring a durable metal frame combined with advanced ceramic insulators, it ensures safe and reliable thermal regulation for various drying cycles. The design allows for seamless integration into existing electrical systems to provide efficient performance and longevity.

Technical Specifications

Appliance Compatibility

- Commercial washing machines
- Drying machines

Component Type	Heating Element
Design Features	Coiled heating wire, Metal frame construction, Ceramic insulators
