

Washing Machine P Shaft

Washing machine P shaft is a component used in washing machines. It is designed to transmit rotational motion, connecting the motor to the washing mechanism.

Product Overview

Precision Engineered Washing Machine P Shaft

The WJ-226-C P Shaft is a specialized component engineered for high-performance washing and drying machinery. Designed to facilitate the reliable transmission of rotational motion, this shaft ensures consistent power transfer from the motor to the central washing mechanism. Built to endure mechanical stresses and the demanding environment of internal laundry equipment, this part is an essential element for maintaining machine efficiency.

Technical Specifications

Design Characteristics

- Rotational motion transmission
- Secure attachment points
- High-stress durability
- Corrosion-resistant construction

Model Identification	WJ-226-C
Primary Application	Washing Machinery, Drying Machinery
