

Washing Machine P Shaft

This P shaft component, model WJ-228-B, is designed for washing machines. It facilitates the rotational movement required for the washing and spinning cycles.

Product Overview

WJ-228-B P-Shaft Component

The WJ-228-B P shaft is a critical mechanical component engineered for heavy-duty washing machine operation. It acts as the primary transmission element, effectively transferring motor power to the washing drum to facilitate consistent spin and wash cycles. Constructed from a durable blend of high-grade plastic and metal, this shaft is built to resist wear and chemical exposure while maintaining operational integrity.

Technical Specifications

Design Features

- Wear-resistant construction
- Chemical exposure resistance
- Integrated water sealing elements

Model Number	WJ-228-B
Function	Power transmission from motor to drum
Construction Materials	Metal, Durable Plastic
