

Washing Machine P Shaft

High-quality P shaft component designed for washing machines. It facilitates the transfer of rotational motion, ensuring efficient agitation and spinning during the wash and rinse cycles.

Product Overview

High-Performance P Shaft Component

The P shaft is a high-quality component engineered specifically for washing machine drive systems. Designed for optimal performance, this shaft facilitates efficient rotational motion to ensure consistent agitation and spinning cycles. It is manufactured to precise specifications to provide a seamless integration and reliable operation, contributing significantly to the machine's overall service life.

Technical Specifications

Model Compatibility	WJ-221
Component Type	P Shaft
Primary Application	Washing Machine, Drive System
