

Washing Machine Speed Reducer

This washing machine speed reducer is a crucial component for efficient and reliable operation. It is designed to reduce the motor's high-speed rotation to a suitable speed for the washing and spinning cycles.

JN-001-AX-35-30

Product Overview

Precision Engineering for Washing Efficiency

The JN-001-AX-35-30 speed reducer is a high-performance component engineered to translate high-speed motor rotation into the precise mechanical requirements of washing and spinning cycles. Built with robust materials and a precision gear system, this unit provides smooth, quiet operation while maintaining long-term stability within the appliance. Its compact design allows for seamless integration across a variety of washing machine models, ensuring optimal operational longevity.

Technical Specifications

Model Identifier	JN-001-AX-35-30
Key Performance Indicators	Quiet Operation, High Durability, Precision Gear System, Compact Design
