

Washing Machine Speed Reducer

This washing machine speed reducer is designed for various washing machine models. It reduces the motor's speed to the optimal level for washing and spinning cycles.

Product Overview

Precision Power Transmission

The WJ-001-AX-40-25 washing machine speed reducer is engineered to provide precise control over motor output, ensuring optimal speeds for both wash and spin cycles. Designed for durability and consistent power transmission, this component facilitates smooth machine operation across various models. Its robust build quality ensures long-lasting performance in demanding appliance environments.

Technical Specifications

Model Number	WJ-001-AX-40-25
Primary Application	Washing Machine, Home Appliance

Performance

Functional Highlights

- Optimizes motor speed for wash cycles
- Regulates spin cycle efficiency
- Durable construction
- Engineered for smooth power transmission
