

Washing Machine Speed Reducer

This washing machine speed reducer lowers the motor's rotation speed for the agitator or drum. It is designed to withstand exposure to water, detergents, and mechanical stress.

Product Overview

Industrial Washing Machine Speed Reducer

The WJ-007-B speed reducer is a high-performance component engineered specifically for washing machine drive systems. It effectively translates high-speed motor output into the controlled, lower-speed rotation necessary for efficient drum or agitator operation. Built to withstand demanding internal environments, it offers reliable resistance against mechanical stress, water exposure, and detergents.

Technical Details

Durability Features

- Water resistant housing
- Detergent resistant materials
- High mechanical stress tolerance

Model Number	WJ-007-B
Primary Application	Washing Machine, Drive System, Agitator, Drum Mechanism
