

Washing Machine Speed Reducer

This speed reducer is designed for use in washing machines. The component reduces the motor's high-speed rotation to a suitable speed for the washing machine's agitator or drum.

Product Overview

Precision Power Transmission

The WJ-001-BX-10Z-SIX speed reducer is a high-performance component engineered specifically for washing machine applications. It serves as the critical link between the motor and the drum, effectively converting high-speed motor rotation into the controlled torque required for agitation and cleaning cycles. Built for durability and reliability, this unit ensures smooth power transmission and consistent operational longevity in household laundry equipment.

Technical Specifications

Model Number	WJ-001-BX-10Z-SIX
Primary Application	Washing machine motor-to-drum power transmission

Key Features

Performance Attributes	High Efficiency, Smooth Operation, Robust Construction, Durable Material
------------------------	--

Classification

Category Path

- Household Electrical Appliances
- Washing and Drying Machinery
- Washing Machines
