

Washing Machine Speed Reducer

This speed reducer is designed for washing machines. It lowers the motor's rotation speed for the agitator or drum.

Product Overview

High-Performance Speed Reducer

This speed reducer component, model WJ-001-BX-11Z-50-40, is engineered specifically for integration within washing machine drive systems. It is constructed from a combination of robust plastic and metal to ensure durability under consistent mechanical stress and varying environmental conditions. Its primary function is to convert high-speed motor rotation into the precise lower speeds required for optimal agitator or drum operation.

Technical Details

Design Features

- Multi-tier structural design
- High-torque gear reduction
- Integrated drive shaft
- Industrial-grade build

Model Identifier	WJ-001-BX-11Z-50-40
Construction Materials	Durable Plastic, Reinforced Metal
Primary Application	Washing Machine Drive Systems
