

Washing Machine Speed Reducer

This washing machine speed reducer efficiently transmits power from the motor to the agitator or drum. Its robust design ensures smooth and reliable operation for effective washing and spinning.

Product Overview

High-Performance Power Transmission

The WJ-002-EP washing machine speed reducer is a precision-engineered component designed to convert high-speed motor rotation into the optimal torque required for washing and spinning cycles. Built with a combination of reinforced plastics and high-grade metal gears, it ensures smooth, reliable power transmission and extended appliance longevity. Its compact form factor allows for seamless integration into a wide variety of washing machine models, making it an essential upgrade for effective performance.

Technical Specifications

Key Functional Features

- Optimized torque conversion
- Compact and modular design
- High-durability gear system
- Smooth power transmission

Model Identification

WJ-002-EP

Construction Materials

Reinforced Plastic, Metal Gears

Performance Metrics

Operational Efficiency

0 Optimal

Torque Conversion

1 Universal

Compatibility Rating
