

Washing Machine Speed Reducer

This washing machine speed reducer efficiently transfers power from the motor to the agitator or drum. It reduces the motor's high-speed rotation to a lower speed suitable for washing and spinning cycles.

Product Overview

Efficiency and Performance

The WJ-002-G speed reducer is a high-performance component engineered to regulate motor output for optimal washing and spinning cycles. By converting high-speed motor rotation into controlled mechanical power, it ensures consistent torque and operational longevity for the washing machine. The unit features a durable housing with integrated gears and bearings to provide reliable, quiet, and corrosion-resistant service across a variety of equipment models.

Technical Specifications

Model Number	WJ-002-G
Material Type	High-durability plastic
Primary Function	Transfer and reduction of motor power

Key Features

Core Advantages

- Corrosion-resistant construction
- Low-noise operation
- Optimized torque control
- Universal model compatibility
