Product Overview

High-Efficiency Macerating Sewage Pump

The GNWQ series is a professional-grade non-clogging submersible sewage pump engineered for the most demanding wastewater environments. Featuring a high-performance integrated cutting impeller, this unit effectively macerates solids and fibrous materials to prevent clogs and ensure continuous, reliable operation. Built from robust, corrosion-resistant materials, it provides a dependable solution for industrial, commercial, and residential sewage management systems.

Technical Specifications

| | |
|------------------|-------------------------------------|
| Pump Type | Submersible Cutting Pump |
| Primary Function | Wastewater maceration and transport |

Key Features

| | |
|--------------------|--|
| Safety Protections | Thermal Overload Protection, Non-clogging Design |
| Materials | Cast Iron, Stainless Steel, Corrosion Resistant |

Application

Suitable Applications

- Sewage treatment plants
- Lift stations
- Industrial wastewater management
- Residential sewage systems
