

Wastewater Stirring Clarifier Tank

Large cylindrical tanks used for clarifying wastewater. They are designed for the separation of solids from liquids through stirring and settling processes.

Product Overview

Industrial Stirring Clarifier

The Wastewater Stirring Clarifier Tank is a professional-grade solution designed for efficient sewage treatment. It utilizes integrated stirring and settling mechanisms to effectively separate solids from liquid phases. Robustly constructed for municipal and industrial scale applications, these units feature integrated access structures for convenient maintenance and operational monitoring.

Technical Features

Process Functions

- Wastewater clarification
- Mechanical stirring
- Solids-liquid separation
- Sedimentation

Design Features

Heavy-duty construction • Top-access maintenance structures • Monitoring-ready

Application Areas

Municipal Sewage, Industrial Wastewater, Water Processing
